Readyscreed Reinforced

By CEMEX UK

Detailed description

Readyscreed Reinforced is a high performance flooring screed which contains a measured amount of polypropylene fibres. As a substitute to light mesh, the use of fibres in screed ensures the reinforcement is in the correct position and correctly distributed. Additionally, mesh does not have to be supplied or stored, and the difficulties in ensuring it is at the right depth are eliminated.

Readyscreed Reinforced demonstrates excellent strength characteristics when tested in accordance with BS EN 13892.

Thickness (recommended minimum):

- Bonded: 25 mm.
- Bonded (monolithic): 12–15 mm.
- Floating: 65 mm.
- Unbonded: 50 mm.

Options

Mix:

- 1:3 - For minimum strength of 30 N/mm² after 28 days.
- 1:4 - For minimum strength of 20 N/mm² after 28 days.
